

VISIOFACE® LITE

Courage & Khazaka

Visioface® Lite

BENEFITS

- ⦿ Increased customer confidence
- ⦿ Added value for customer
- ⦿ Improved customer service
- ⦿ Improved product and treatment
- ⦿ recommendation
- ⦿ Personalisation of software
- ⦿ Improved customer loyalty
- ⦿ Increased sales
- ⦿ Create a professional approach

The Visioface® Lite is a full face photographic method for facial skin analysis, optimal product recommendation and treatment documentation. It consists of a small lightweight booth made out of a special light transmitting plexiglass in which the face is placed for a photographic image. When not in use the light is blue, but as soon as the face is placed on the rest the light becomes white light, illuminating the face homogeneously, ready for capturing an image. Images are then analysed with the Complete Skin Investigation Software (CSI). The CSI-software is also used to operate the Multi Skin Test Center MC1000. The overlay feature enables you to make more accurate comparisons for follow-up visits. Products and treatments can be included in the software and a product and treatment recommendation printed for the client.

FEATURES

- ⦿ Full face photography
- ⦿ Hardware consisting of a small lightweight facial
- ⦿ booth in which the face is placed

- White light transmitted via plexiglass illuminates
- homogeneously without requiring service
- Built-in miniature (5 megapixel) camera
- Complete skin analysis software
